

Emergency Radio 101 – Trainer Guide

Introduction

This is a fun workshop that's good for almost any audience. It's always topical because practically every place is subject to some kind of disaster, and it's no great exaggeration to say that a disaster has always just happened *somewhere*, even if not the US.

Because learners for this one do not need a license or any radio knowledge or experience, it's a great way to find folks for future workshops and activities. For all the above reasons this will probably be one of the workshops you give most often.

Overview

Who: People who do not need any radio knowledge or experience whatsoever.

What: An engaging overview of how radio can help learners, their families, and their community during a disaster.

When: This is a great first workshop for learners to attend. It introduces GMRS and Ham radio, both of which have their own 101-level workshops that can be done next if learners are interested. It also mentions PACE planning, a fun activity that can come next. Finally, you could offer the Radio Practical Skills activity next, too.

Why: To provide immediately actionable information for folks and get them started on their radio journey.

How: In a 90-minute slideshow, including Q&A, along with a single handout.

Logistics

Like for most other workshops, Emergency Radio 101 requires:

- A room big enough for all the participants
- A projector and a screen
- A handout for every participant
 - Handout is 4 pages, or 2 pages double-sided
